Master of Business Administration

Students in the MBA Program will develop their managerial skills by integrating an understanding of the human dynamics and technological requirements of today's business organizations. The MBA program blends study of leadership, project team management, and operations management with the study of the role of information systems on business decision making. Study is further enhanced by focusing on the specifics of business discipline areas such as Business Analytics, Corporate Finance or Global Business.

MBA Program Requirements (1)

A course in calculus is a prerequisite for the MBA. This prerequisite may be waived for students who present satisfactory equivalent preparation. Applicants who have not met this prerequisite may take the course after admission.

Foundation Courses (7)

Each student must complete seven foundation courses. The courses may be waived for students who have taken the equivalent material at the undergraduate level within the last five years and received a grade of “B” or better. If foundation courses are not waived at the time of admission, the student must take the graduate-level version of the course.

Advanced Program Courses (9)

After a student has completed all required foundation courses, he or she will begin the advanced portion of the program with two consecutive semesters of cohort study (in the Fall then Spring, or vice versa). Full-time students may enroll in courses in addition to the required cohort courses, while part-time students must take the prescribed two Cohort Semester I courses simultaneously. Upon completion of the Cohort Semesters, students move on to take their remaining advanced courses and electives.

Elective Courses (3)

Each student will complete three electives at the 600-level. Students can establish a concentration by taking all electives in a single area.
