Master of Arts in Economics
General Option

The program’s core curriculum focuses on state-of-the-art modelling and statistical skills. Many graduates use those tools as analysts or researchers in the private and public sectors. Some students decide to pursue additional training in a PhD program.

The general option allows students to tailor their elective courses to their own academic interests and career goals. For example, students could pursue interests in environmental economics, public policy, finance, math or another complementary field.

The degree can be completed on either a full-time or part-time basis. All required economics courses are offered in the evening.

Curriculum

Prerequisites
